MEMO TO FILE:

Re: Hydro-Jet Services, Inc.
ACT 017-001

On Monday, February 7, J. R. Rookstool from NAC informed this office that Jacobs Engineering in Pasadena has determined that the present tailings facility has a 60,000 ton capacity. The planned mill would process 300 TPD of ore and at this rate the present tailings facility would be full in seven months.

Jacobs is now trying to determine what a proper tailings facility would cost (without doing the preliminary environmental assesment.)
